PROFESSIONAL SUMMARY

Passionate AI/ML Engineer and pre-final year B.Tech student with hands-on experience in building predictive models, deep learning pipelines, signal processing, time-series forecasting, and web application deployment. Proficient in Python, Scikit-Learn, TensorFlow, and Flask with strong foundations in feature engineering, statistical analysis, data visualization, and algorithm optimization.

EDUCATION

B.Tech in Artificial Intelligence & Data Science | Ramco Institute of Technology (2024-2028) | **CGPA: 7.80/10**

TECHNICAL SKILLS

Programming Languages: Python, Pandas, NumPy
Machine & Deep Learning: Scikit-Learn, TensorFlow, Neural Networks, Supervised & Unsupervised Learning, Hyperparameter Tuning
Libraries & Frameworks: Flask, Librosa, SciPy
Data Analytics & Viz: Exploratory Data Analysis (EDA), Statistical Analysis, Matplotlib, Seaborn, Power BI
Engineering & Preprocessing: Feature Engineering, Signal Processing, ETL, Data Normalization, Missing Value Imputation
Databases & Tools: SQL, Git, Jupyter Notebook, VS Code, MS Excel

WORK EXPERIENCE

Machine Learning Intern | Gradtwin Jun 2026 – Jul 2026
- Developed and deployed predictive models using Python, Scikit-Learn, and TensorFlow to solve real-world analytical problems.
- Engineered custom features, handled complex missing value imputation, and normalized datasets to enhance model performance.
- Evaluated and fine-tuned classifier models using Precision, Recall, F1-Score, RMSE, and ROC-AUC.

Python Developer Intern | Codsoft Jan 2025 – Jan 2025
- Designed and deployed web application components and REST APIs using the Flask framework.
- Automated data processing scripts and workflows using modular Python code.

Data Analyst Intern | Codveda Technologies Dec 2025 – Jan 2026
- Executed data extraction and cleaning routines using SQL and Pandas for exploratory data analysis (EDA).

KEY PROJECTS

Fake Audio Detection & Classification System
Technologies: Python, Librosa, Scikit-Learn, TensorFlow
- Designed an end-to-end Machine Learning pipeline to detect deepfake and synthetic voice artifacts from audio recordings.
- Extracted key acoustic features including MFCCs, Spectral Centroid, Chroma, and Zero-Crossing Rate using Librosa.

Commodity Price Forecasting
Technologies: Python, Pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn, Yahoo Finance API, Power BI
- Developed a machine learning and data analytics solution for analyzing historical gold prices and forecasting future trends.
- Applied time-series feature engineering and regression models to generate forecasts and interactive dashboard insights.
